Rugby Xplorer

WHAT IS RUGBY EXPLORER?

Rugby Xplorer or RX is a profile-based system with effective integration with registration, learning systems, referee management systems, and competition management systems for players, coaches, managers, referees, and other participants. Whether you're looking for the latest match schedules, player stats, coaching and development resources, RX will be your go-to destination. RX was developed in 2018 by Rugby Australia and is now in service in 2 countries (AUS and US) as well as in Oceania Rugby across Oceania Unions.

RX will replace the current system, Sporty and will provide end to end services for Provincial Unions, Clubs and Schools. We are underway with building a platform to future-proof all parts of the rugby delivery system with the aim to transform how we engage with and experience rugby through technology. From 1 October 2024, RX will be the membership and competition management system for rugby in New Zealand.

WHY ARE WE CHANGING?

We want to develop a future proof sports system for the rugby community – including participant safety and wellbeing, protection of sensitive data, evolved competition and member management systems.

A financial benefit of change, ensure minimum scope creep and realise the 1-2 years payback period.

Improvement in the joining experience – this is reflected by having positive messaging from our participants within the system.

Ensue that the solution delivered is future proofed – examples being that we can in the future integrate with LMS, content streaming.

Ensure that the solution is secure and PCI compliant.
